"This blank is the result of input by several industry board builders. The goal was to design an EPS mold plug that would accommodate any Longboard shape program in the 8'10" to 9'6" range for machine cutting purposes. After analyzing our rocker template database we came up with a 'middle of the road' rocker profile and added thickness to the nose and tail to allow for straight to extreme profiles. The plan shape and width have also been maximized. This blank is offered in 3 thicknesses to accommodate both machine and hand shaping."
